

ENGSE601 Week 05 - Component Test Case Set v1

Project: ScamGuard - Scam Image Detection Application
Activity: Code & Logic Reading Clinic
Author: ภาณุวัฒน์ คำคำ
Date: 22 September 2026
Artifact status: Ready for Review

1. Test Basis and Scope

Canonical Requirement/SRS: `https://github.com/Panuwat-ta/project/tree/main/Document/srs` , branch `main` , SRS v1.1 dated 2026-09-12. Source-code baseline: `https://github.com/Panuwat-ta/project` , branch `main` , commit `66bc9e4a` . Scope covers four current requirements/components: FR-ANALYSIS-02 (`onnx_worker.py`), FR-ANALYSIS-04 (`risk_calculator.py`), FR-AUTH-01 (`auth.py` + schema), and FR-PDPA-01 (`ConsentLog` + user/consent routes). W03/W04 are used only as historical handoff when consistent with SRS v1.1.

Out of scope: dataset-level Accuracy/F1/mDice, GPU performance, full System/UAT journey, and unstated retroactive research-data rules.

2. Execution Summary

Result	Count	Meaning
Pass	7	Executed/inspected result aligns with SRS v1.1
Fail	9	Executed/inspected implementation does not align with SRS v1.1
Not Ready	1	Required component contract is not yet available for an independent test
Needs Clarification	1	Requirement example conflicts with its own algorithm semantics
Total	18	Component test cases in this artifact

Evidence is stored as plain text under `WEEKS/week-05/work/evidence/` ; the reproducible probe is `work/probes/component_probe.py` .

3. Component Test Cases

3.1 Visual Analysis - FR-ANALYSIS-02

ID	AC	Expected	Actual	Result
CT-01	AC-1	Separate <code>forgery_confidence</code> 0-100 traceable to forgery signal	Worker exposes <code>visual_risk_score</code> ; no <code>forgery_confidence</code> key	Fail
CT-02	AC-2	Separate <code>ai_gen_confidence</code> from AI-Gen detector	<code>ai_gen_prob</code> is max SegFormer probability; no separate AI-Gen field	Fail
CT-03	AC-3	Visual-score calculation can be tested from canonical signals	Separate signals/contract required by SRS are not available on main	Not Ready

3.2 Risk Calculation - FR-ANALYSIS-04

ID	AC	Input	Expected	Actual	Result
CT-04	AC-1	50/85/0	90, High, primary visual	90 high visual True	Pass
CT-05	AC-2	100/100/100	cap at 100, High	100 high visual True	Pass
CT-06	AC-3	score basis 10	Low	10 low	Pass
CT-07	AC-4	score basis 30	Low	30 low	Pass
CT-08	AC-5	score basis 55	Medium	55 medium	Pass
CT-09	AC-6	score basis 80	High	80 high	Pass
CT-10	AC-7	stated 65 total / 85 visual	High by visual override	Hybrid max uses visual in base; same calculator cannot produce total 65 when visual is 85	Needs Clarification

3.3 Registration - FR-AUTH-01

ID	AC	Expected	Actual	Result
CT-11	AC-1	successful response has <code>id</code> , <code>full_name</code> , <code>email</code> , <code>role</code> , <code>status</code> , <code>created_at</code>	response keys: <code>email</code> , <code>full_name</code> , <code>id</code> , <code>message</code> , <code>role</code>	Fail
CT-12	AC-5	System Consent=false -> HTTP 400, create nothing	handler returns <code>UserResponse</code> and adds <code>User + ConsentLog(false,false)</code>	Fail

CT-13	AC-1 subcondition	Research Consent=false must not block registration	handler succeeds and persists research=false	Pas s
-------	-------------------	--	--	-------

3.4 Consent Management - FR-PDPA-01

ID	AC	Expected	Actual	Result
CT-14	AC-2	event/log model supports consent_type, is_granted, timestamp and 2 records	current model stores one row with two booleans	Fail
CT-15	AC-3	PUT /consent/research revokes research consent and records update	endpoint not present on main	Fail
CT-16	AC-4	GET /users/me returns current-user profile	profile GET is /api/v1/auth/me; /api/v1/users/me is DELETE	Fail
CT-17	AC-5	GET /consent/logs returns consent history	endpoint not present on main	Fail
CT-18	AC-3/5	consent history supports updated_at	current ConsentLog has created_at only	Fail

4. Evidence

E05-01 Existing automated test

server/tests/utils/test_risk_calculator.py on the isolated main baseline:

```
.
[100%]
1 passed in 0.03s
```

E05-02 Reproducible component probe

The probe confirms Hybrid max+bonus examples/boundaries, registration handler behavior, route inventory, and the Visual Analysis output contract. Raw evidence:

work/evidence/E05-component-probe.txt .

E05-03 Baseline record

work/evidence/E05-baseline.txt records the ENGSE212 main commit and the SHA-256/version of canonical SRS v1.1 used for this artifact.

5. Findings and Handoff

Finding	Disposition / next action
F01 Visual dual-signal contract absent	Accepted implementation gap; fix ENGSE212 visual/AI-Gen output contract, then re-test
F02 AC-7 example is not producible by Hybrid max+bonus	Clarify canonical SRS wording; does not invalidate AC-1/2 algorithm evidence
F03 Register response misses status/created_at	Fix response schema/handler and add contract test
F04 System Consent=false is accepted	Add validation/guard before persistence and re-test
F05 Consent storage differs from event-log SRS contract	Reconcile schema/migration before integration testing
F06 Research-consent update/log routes missing	Implement endpoints and component tests
F07 /users/me route contract mismatch	Select canonical route and sync SRS/code via controlled change
F08 W03/W04 used v1.0	Closed for W05; SRS v1.1 is current authority

These product defects do not invalidate the Week 05 V&V artifact: failed tests are preserved as evidence and handed off to W06/W07/W14 rather than converted to Pass.

6. AI Use and Integrity

AI was used to organize test cases, run read-only/local verification through Remote Desktop Commander, compare code with SRS, and draft the report. All expected results were checked against SRS v1.1; all actual results come from executed probes/tests or direct source-contract inspection. No test result, stakeholder decision, screenshot, or approval was fabricated.

No `.env`, token, API key, production password, or production database content is included. The component probe uses test-only configuration and an in-memory fake DB.

7. Review Gate

Author-side Definition of Done is complete: canonical source/version is pinned, 18 test cases are traceable, raw evidence is stored, findings have owner/next action, and AI use is disclosed.

Per `TEAM.md`, independent human peer review by **เอกพันธ์** is still required before merge/tag as `Submitted`. Until that sign-off exists, this artifact is **Ready for Review** and must not be represented as peer-reviewed or Submitted.
